

reev ready Business

Licence key for one charging point including energy management system

The reev ready Business licence key enables the integration of a reev ready ABL charging station into the reev energy and charging platform. The reev software licence Business is activated for a single charging point using the licence key.

COMPREHENSIVE CONTROL

The Business Licence enables the commercial operation of the charging infrastructure by offering fee- and time-based charging and provides access to the integrated energy management system. In addition, charging stations can be managed and controlled automatically, including automatic billing of charging processes and evaluation and monitoring of existing usage information. Thanks to the AI-based Smart Recovery functions, faulty or offline charging stations can be easily put back into operation.

INTUITIVE USER GUIDANCE

Thanks to the intuitive online operator interface, the charging infrastructure can be controlled remotely with ease. The Business licence allows user-defined roles and rights for different team members and cross-account monitoring and user management for several companies. Drivers can also use the reev app for iOS and Android.

GENERAL INFORMATION

Model	reev ready Business licence key including EMS
Licence period	24 months from activation; can be extended for a fee directly in the reev platform
Product number	100000828
EAN number	4011721196916
Commodity code	85235110
Packaging unit (PU)	1
Packaging dimensions (H×W×D)	Approx. 170 × 110 × 10 mm
Items supplied	Slipcase with Business licence key (AC or DC), 2 RFID key fobs

PRODUCT HIGHLIGHTS

-  Integration into the reev energy and charging platform
-  Optimised consumption monitoring with integrated energy management system
-  Commercial marketing of the charging infrastructure
-  Free reev app for displaying the charging history and invoices and for starting charging processes on the go
-  PV-optimised charging & time-based pricing
-  Automated reports & billing
-  Multi-account & bulk imports

COMPATIBLE CHARGERS

- All ABL eM4 reev ready charging stations
- All ABL eMC3 reev ready charging poles

RANGE OF FUNCTIONS OF THE REEV ENERGY AND CHARGING PLATFORM

Management	Management of the charging infrastructure (charging points, authentication, RFID cards, user roles) for multiple accounts and role-based user profiles, mass imports for efficient management
Monitoring	Automated monitoring and reporting with an overview of charging points, operating states, charging power and charging times
Analysis	Extended data provision and visualisation including recommendations for action
Smart Recovery	AI-based detection and troubleshooting of failed or offline charging stations
Comprehensive billing	Automated billing of authorised users with individual or time-based tariffs, automatic invoicing and payment collection via payment service providers
Ad-hoc charging	Marketing of charging points to spontaneous users with flexible tariffs, automated billing and crediting of revenue
eRoaming	Integration of the charging points into third-party platforms for extended marketing and monthly billing of revenues
Software updates	Regular software updates for secure & stable operation
Support	Personal support for technical questions
reev app	Free reev app for users to track charging history, view invoices and start charging processes on the go
reev GHG quotas	Participation in the GHG quota for eCompany cars, ePool vehicles and publicly accessible charging points to generate additional revenue
Payment terminal (optional)	Card payment via a physical terminal for spontaneous charging processes with automated billing and receipts

RANGE OF FUNCTIONS OF THE ENERGY MANAGEMENT SYSTEM

Load management	Static and dynamic load management
Protection	Protection of the charging infrastructure and the building
Charging optimisation	More efficient and faster charging
PV integration	Cost-effective charging via PV connection and PV surplus charging
Prioritisation	Prioritisation of users and charging points
Load imbalancing elimination	Avoiding load imbalance according to §14a EnWG
