Pretium® 3-Module Housing (PCH-M3-01U)

CORNING

Features and Benefits

Plug & Play™ Universal Systems compatible
Ease of use and maximize density

Module tray slides forward
Ease of access

Rugged gunmetal gray construction
Durability and matches other housings

Cable strain-relief
Fiber protection

Removable cover and air holes
Aids in cooling

Corning Pretium® PCH-M3-01U housing is designed to maximize density and optimize ease-of-use in Plug & Play™ universal systems applications. It holds three CCH-style modules and utilizes the RJ-clip integration, holding six-size zero plugs.

When using LC duplex or MT-RJ adapters, 24-fibers per module are available, providing a total modular 1U density of 72 fibers. The shallow 8.75-in depth of this rugged metal housing allows it to fit conveniently in many cabinet installations with housings mounted back to back. The shallow feature also minimizes airflow, maximizing the impact of cooling agents. To also aid in cooling, the rear of the housing includes offset airflow openings designed to allow more air into the housing. For heat-sensitive environments, the rear cover may be removed to further improve airflow through the unit. The housing mounts to a standard 19-in frame and includes cable strain-relief via the RJ-clip integration piece.
